Skill 3 – Deploying an Nginx Web Server on AWS EC2

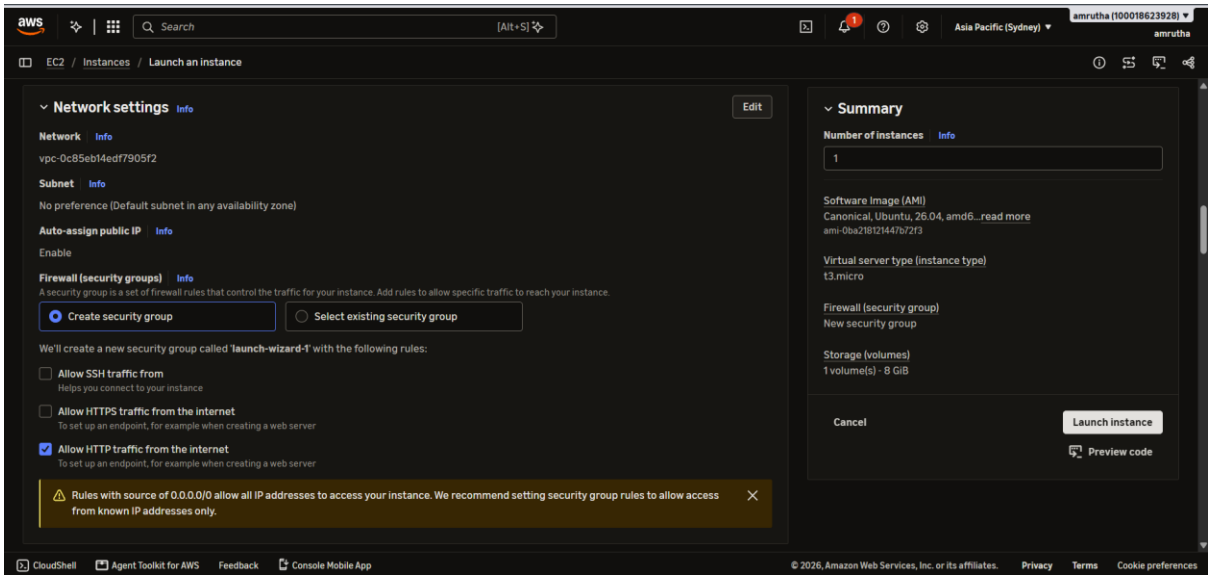

1.Open EC2: Search for EC2 in the AWS Management Console and select the EC2 service.

2. Launch an Instance: Navigate to Instances and click Launch instances. Enter the instance name as nginx and select Ubuntu as the operating system.

3.Configure Network Settings: Enable Auto-assign public IP and allow HTTP traffic from the internet by configuring the security group.

4.Configure User Data: Expand Advanced details and enter the following startup script in the User data field.

#!/bin/bash

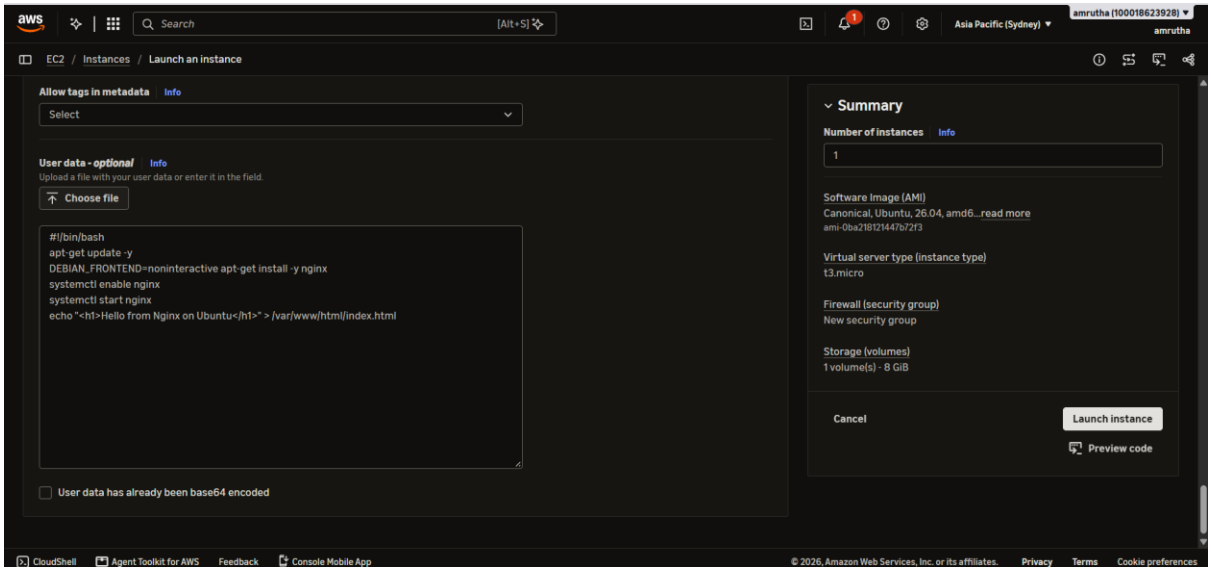

apt-get update -y

apt-get install -y nginx

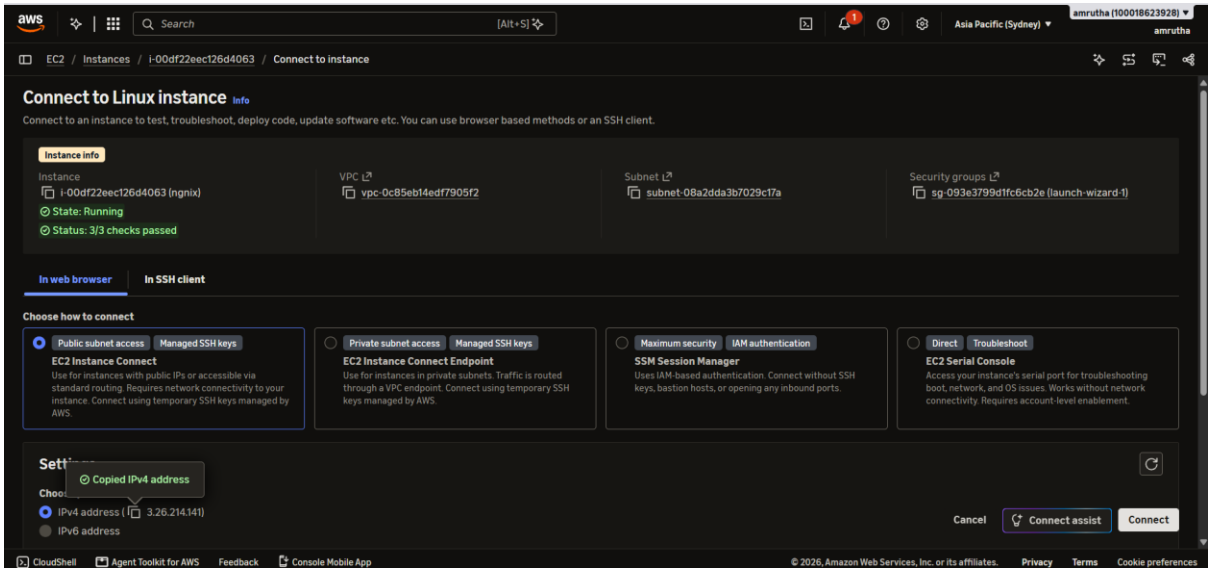

systemctl enable nginx

systemctl start nginx

echo "<h1>Hello from Nginx on Ubuntu</h1>" > /var/www/html/index.html

5.Launch and Connect: Click Launch instance, wait until the instance reaches the Running state, and select Connect to access the Ubuntu instance.

6.Verify Nginx Web Server: Copy the Public IPv4 address, open a web browser and enter the IP address to verify the message "Hello from Nginx on Ubuntu".

Hello from Nginx on Ubuntu
