Skill 4 – Amazon S3 Bucket Creation and Versioning

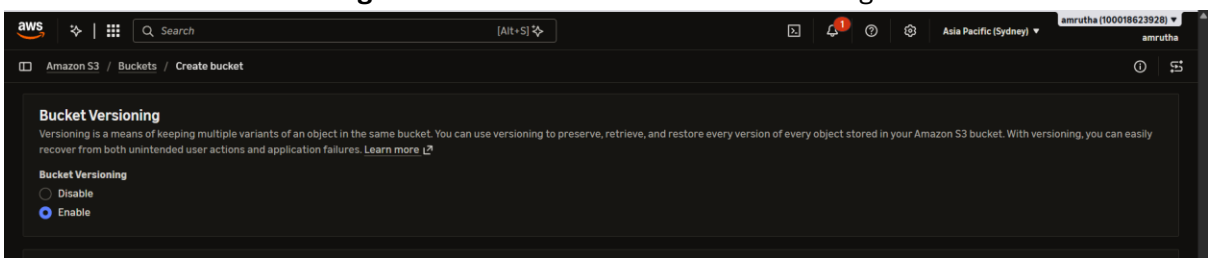

1. Open Amazon S3: Search for S3 in the AWS Management Console and select the Amazon S3 service.

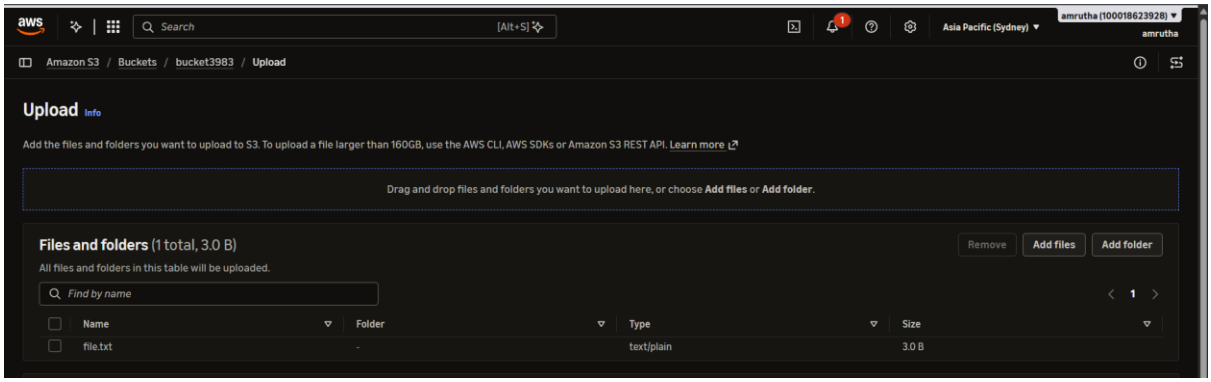

2. Create a Bucket: Click Create bucket, select General purpose bucket type and Global namespace. Enter the bucket name as bucket3983.

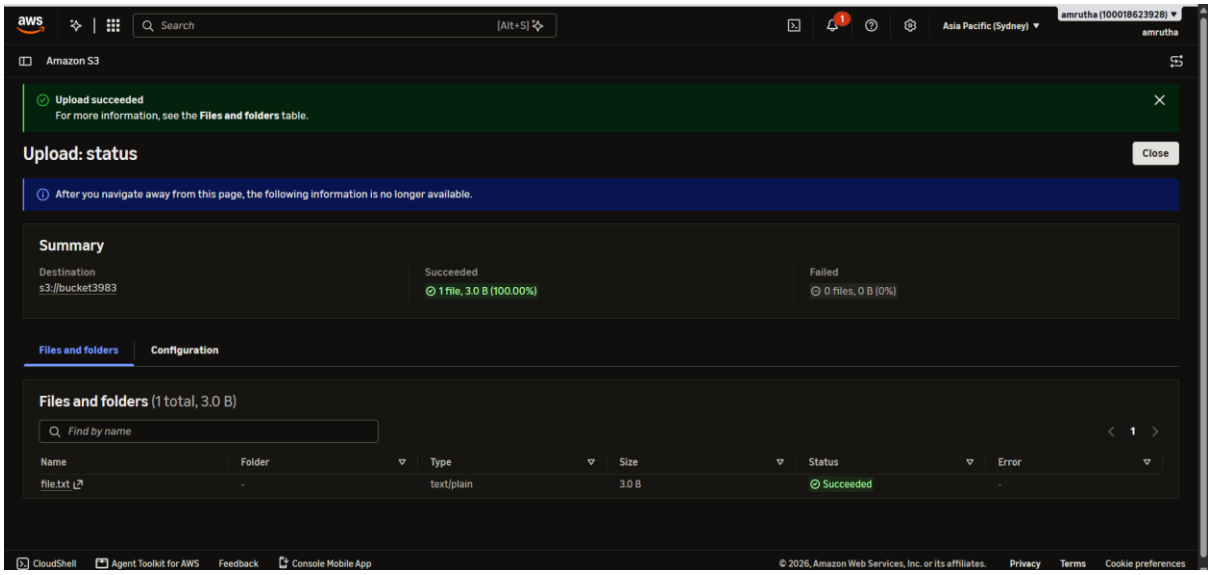

3. Enable Bucket Versioning: Select Enable under Bucket Versioning and create the bucket.

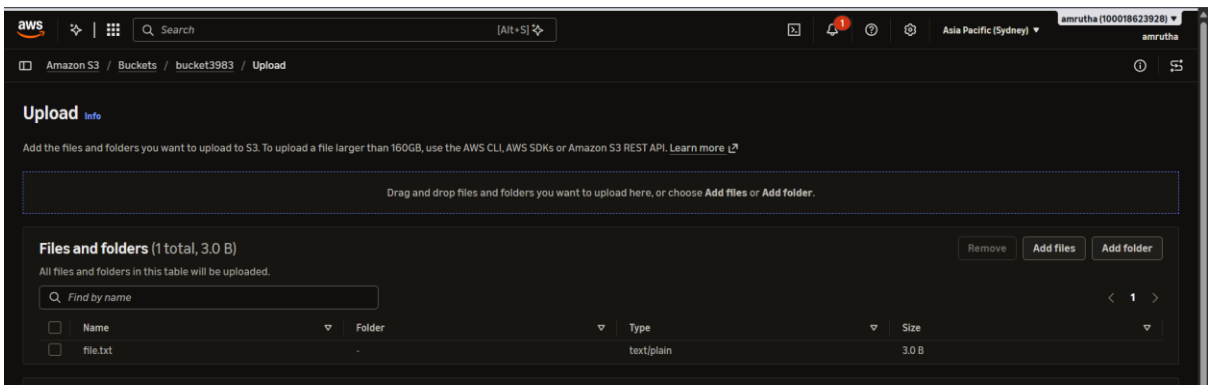

4. Upload Objects: Open the newly created bucket, click Upload, select the file.txt file using Add files and verify the selected file.

5. Verify Upload Status: Click Upload and wait for the Upload succeeded confirmation message. Verify that the file status is Succeeded.

6. Upload the File Again: Return to the Upload page, select the same file.txt file and click Upload to upload it again.

7. Verify Object Versions: Open the Objects tab, enable Show versions and verify that multiple versions of file.txt are displayed in the bucket.
