SKILL 2 – MFA Authentication Setup

Enable MFA on the root user of your account and prepare a short note comparing virtual MFA devices, hardware MFA devices and FIDO security keys.

Step 1 :

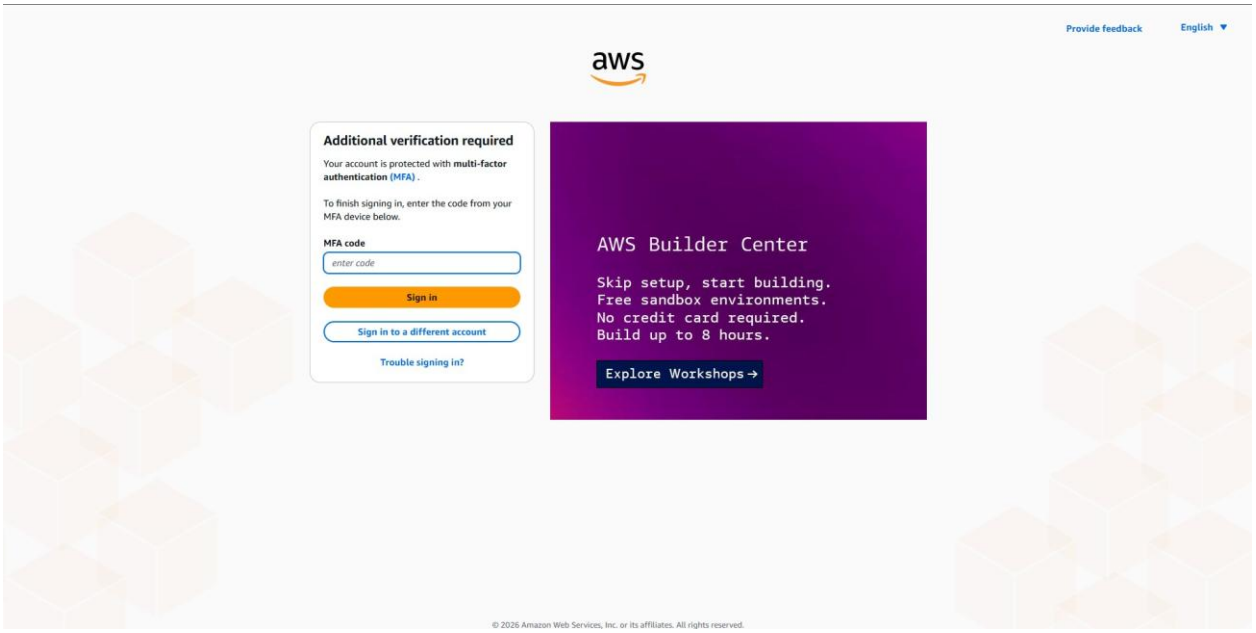

Step 2 :

Set up authenticator app
An authenticator app is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Show QR code
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code.
Alternatively, you can type a secret key.
(Show secret key)
3
Enter two consecutive codes from your authenticator app. Enter the first code, wait a few seconds and then enter the second.
First code
6 digit code
Second code
6 digit code
Cancel
Register MFA

Step 3:

aws
Register virtual MFA device
You have successfully assigned this virtual MFA device.
We encourage registering multiple MFA devices in case your primary method is lost or inaccessible.

Step 4 :

Provide feedback
English
aws
Additional verification required
Your account is protected with multi-factor authentication (MFA) .
To finish signing in, enter the code from your MFA device below.
MFA code
enter code
Sign in
Sign in to a different account
Trouble signing in?
AWS Builder Center
Skip setup, start building.
Free sandbox environments.
No credit card required.
Build up to 8 hours.
